### **WITH Univer Product Plc.**

Are you ready to make a change and revolutionize the packaging of the food industry? What is the next generation of environmentally friendly packaging in the most feasible and sustainable way?

Sustainability

## **Background**

Univer Product LTD is one of the leading food seasoning and other food manufacturing companies in Hungary. However, Univer is a rather Central-European regional company with mostly private label or industrial European export sales. Univer's product portfolio can be found in nearly every household. Our core products are mayonnaise, mustard, ketchup products, and pepper based food seasonings such as Piros Arany (Red Gold), Erős Pista (Strong Steve) and Gulyáskrém (Goulash Paste). The versatile portfolio of Univer also contains tomato concentrate, fruit jams and juices, baby food, vegetable spreads, and bakery products. As a stable market leader, we are determined to make an impact on the environmental footprint and the mindset of thousands of people by making a change with next-generation packaging solutions.

## **Problem**

Taking an environmental protection approach in replacing the problematic plastic or laminated packaging materials of Univer food seasonings and other food products is an urgent challenge. At the same time, taking into consideration the viewpoints of feasibility (food safety, availability, etc.), sustainability, and consumer acceptance is a must.

1) The goal is to propose creative solutions with a combination of existing and budget-friendly technologies that lead to a drastic decrease in problematic plastic and laminate usage.

2) Techniques and packaging material commonly spread across the industry are not favorable in the context of new demands of our sustainable future.

What is your interpretation about the next generation packaging of the food industry?

We are ready to make a change, are you?
