# Professor DR. GYÖRGY LÁZÁR

Dean of Medical School

# Professor DR. MÁRIA DUX

## Vice-Dean for Educational Affairs

**DEAR FUTURE COLLEAGUES,**

You have chosen a profession that is without doubt one of the greatest of all callings. I am certain that the road behind you was not an easy one. As your former teacher, I can tell you that your studies are not over just yet. You have chosen a profession where you constantly need to update and expand your knowledge. I hope that in the future each of you will be able to find the field of healing work that you are most comfortable with, in which you can fulfil your love of your profession and which will be a source of success and joy for the rest of your careers. I hope you will find joy also in the world around you, in the wonders of nature, the arts, human relationships, friendships, family - in everything that embodies life. Be a defining and exemplary intellectual to your society.

**Prof. Dr. Mária Dux**  
**Department of Physiology**

# Albert SZENT-GYÖRGYI

In the early 20th century, researchers, including Hungarian scientist Albert Szent-Györgyi, isolated a substance called 'hexuronic acid' from adrenal glands and later from paprika. In 1932, American chemist Charles Glen King identified this compound as the anti-scurvy factor found in citrus fruits, renaming it ascorbic acid (from Latin 'scorbutus,' meaning scurvy).

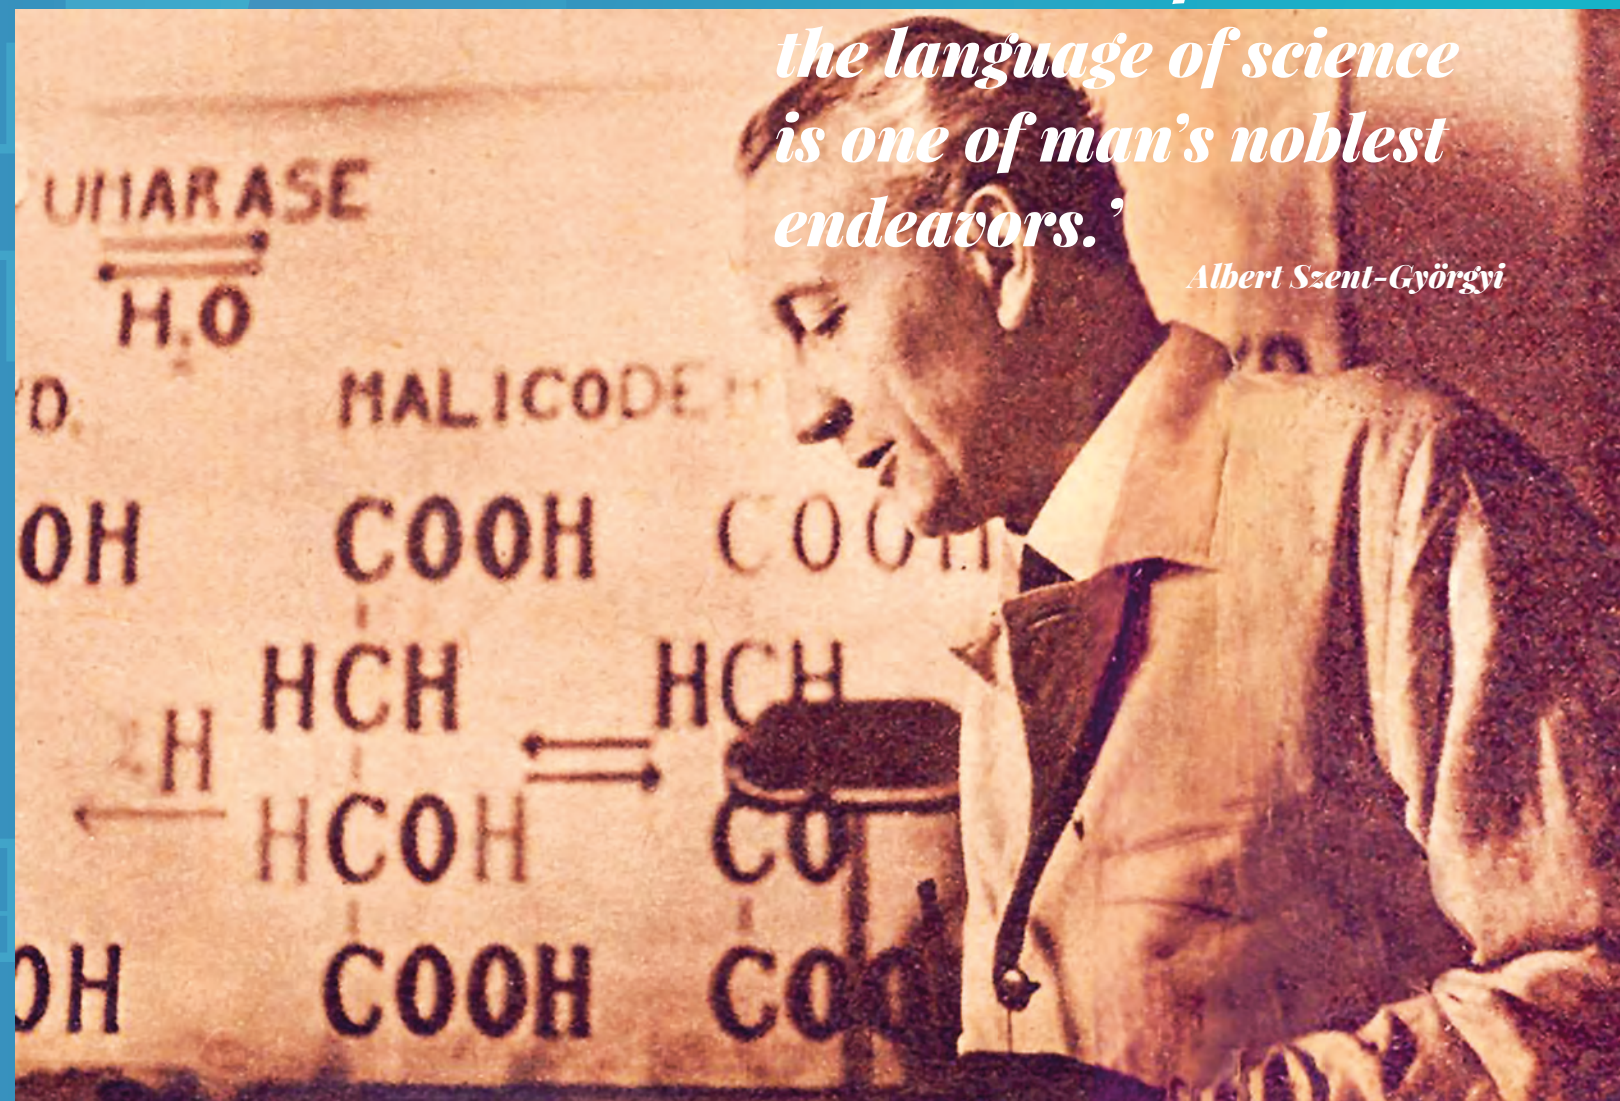

Szent-Györgyi's further work on Vitamin C earned him the 1937 Nobel Prize in Physiology or Medicine. This discovery revolutionised nutrition science, highlighting the importance of vitamins in human health.

*'Life is a wondrous phenomenon. I can only hope that someday man will achieve a deeper insight into its nature and its guiding principles and will be able to express them in more exact terms... To express the marvels of nature in the language of science is one of man's noblest endeavors.'*

*Albert Szent-Györgyi*

# Katalin KARIKÓ

Katalin Karikó is a Hungarian-American biochemist who attended the University of Szeged where she earned her Bachelor's Degree, in Biology in 1978 and her Ph.D. in Biochemistry in 1982.

Her research laid the foundation for the development of mRNA-based vaccines, including those used to combat COVID-19.

Katalin Karikó was awarded the Nobel Prize in Physiology or Medicine in 2023. During a lecture at the University of Szeged, the biochemist revealed her plans to donate a replica of her Nobel Prize to the university, along with over \$500,000, which will be allocated to support exceptional teachers and students.

*'You have to be  
a champion of failure.'*

*Katalin Karikó*

## Dear Survivors

(as you sometimes call yourselves),

First and foremost, I would like to congratulate you on this monumental achievement! Even though in the first two years of your journey you probably saw more of your phones and laptop monitors than of your classmates, you have built a strong community in the end. Cherish the memories and connections you've made, as they will support you throughout your career. As you step into the next chapter of your life in the field of Medicine, remember that your Alma Mater will

always be here for you, providing guidance and encouragement as you navigate the challenges ahead. Also, as your Alumni Coordinator, I can only encourage you to stay in touch and assist current students by sharing your experience and insights. Your patients will need and rely on you, just as the community here at your Alma Mater does. Wishing you all the best for a bright and successful future!

Warm regards,

**Vanda Varga**

# YEAR REPRESENTATIVE

During my time as the year representative, I was mostly responsible for providing a meaningful and efficient bridge between my fellow classmates and the administrative bodies of our university.

It was a pleasure to be granted the opportunity to be able to guide the students and provide them with the suitable support to ease their studies while assisting them in solving and dealing with any academic and administrative concerns they may have had along the way, and finally to motivate them to keep on top of their academic preparations and examinations.

While being the year representative, I learnt many things that I feel will benefit me in the 'more' open world outside of the university/student life. It was in some moments a time-consuming role with some additional levels of stress but in the end, it was a highly rewarding experience which helped me attain improvements in my time-management, social, teamwork and leadership skills, which as mentioned should definitely benefit me in the nearby future.

As I move on from this moment in my life accompanied by the best set of people I had a pleasure of meeting and guiding as their year representative, my only advice would be to never give up, and that as long as there is a clear goal set in mind, there can only be hope and eventually success in you achieving your dreams.

***Otoibhi Eugene Emmanuel***

# International Student Union of Szeged (ISUS)

The International Student Union of Szeged (ISUS) serves as a voice for all medical students enrolled in both the English and German programs at the University of Szeged's Albert Szent-Györgyi Medical School. We aim to enrich the academic and cultural experiences of our students, supported by a robust student advisor program and academic advisors from our student academic team. These resources are designed to promote academic excellence and bridge the gaps not only among students but also between students and the university.

To equip students for their future professional paths, ISUS provides essential information about licensing exams and features alumni guest speakers who offer insights and experiences. Our vibrant community is also enlivened by cultural and social events, such as international food festivals, Halloween parties, and spring barbecues. These events foster cultural exchange and create a supportive network that eases the transition for newcomers into university life.

As President of ISUS, it was a privilege to have led such an integral organization. Our efforts ensured that every student was heard and supported, enabling them to successfully navigate their academic and professional journeys, thus ensuring a rich, rewarding university experience for everyone.

**LEE, Chang Yong**  
**President of ISUS**

**Served from June 2024 - June 2025**

The background is a solid blue color. It features several white medical symbols: a large, faint heart shape in the upper left, a large, faint cross in the upper right, and a large, faint cross in the lower right. A white heartbeat line (ECG) runs horizontally across the middle of the image. There are also several smaller, faint white crosses scattered throughout the background.

## KANG KI HYUNG

RADIOLOGIST

### **Dear Sixth Year Students,**

I am honored to be invited to your 2025 Yearbook.

As your anatomy teacher, I was one of the people you met first at the Medical School in Szeged. I encouraged you at your first MTO, gave you a 'magic pencil' to complete the tests, and did not let you get frustrated after a failure and give up on your dreams of coming here. By now, the exam topics and written essays to be submitted have run out, but the challenges of life are just beginning.

You have gained far more than just professional medical knowledge during your time here. You have gained dedication, perseverance, and a deep appreciation for hard work to make your dreams come true. You have acquired the skills to work independently, but have also learnt to cooperate effectively as part of a team. You have come to understand that being a medical doctor is more than just a career. The medical profession is a constantly changing and evolving field of work, and this challenge must be met by all.

Now, an era is coming to an end in your life, and a new one is born, but in its place a void remains. But you have embraced new cultures, encountered unfamiliar names and faces, and even you have forged lifelong friendships that will endure.

I believe that a good teacher is happy when her students are successful and also when they outperform her. And I also believe that the only way to do a great job is to love what you do. I wish all this as a guide for your profession in the future.

Thank you for letting me hold your hands, believe in you, and teach you:

**DR. ADRIENNE MÁTYÁS**

### **Dear Former Students,**

It is a great privilege for me to share a few thoughts with you.

During the first two years of your medical studies, you had learned both essential and non-essential aspects of anatomy. As you continue your medical journeys, the task of determining what is truly essential and what is less so will be yours. With each step, you will grow and improve along your lifelong learning paths.

In personal life, however, "It is only with the heart that one can see rightly; what is essential is invisible to the eye" (from The Little Prince).

At times, you may overlook important things, but do not despair. Learn from your mistakes and carry on with your mission.

Be trustworthy and stay proactive, and you will experience a sense of achievement that will help protect you from the dangers of burnout.

I wish you all the best of luck, true success, and lasting happiness.

Cheers,

**DR. ENDRE DOBÓ**

# **FAVOURITE TEACHERS**

### Dear Students,

It is truly an honor to know that you remember me and that I have a place in your yearbook. Biochemistry was likely an important foundation for all of us, but perhaps it's also true that I showed you things beyond just scientific knowledge—things that contributed to your personal growth as well. If that's the case, I am especially pleased. From my perspective, we went through a very special time together. During the COVID pandemic, when lock-

downs changed everything, there may have been fewer opportunities for in-person interactions. Yet, I feel that our connection became more personal in many ways. The fact that everyone logged in from home allowed us to connect in a way that wouldn't have been possible in a traditional classroom. It wasn't the typical lecture experience, but it still brought moments of honesty and closeness.

As you approach the end of your studies, I hope you will always remember that the medical profession is not just about knowledge—it is also about respect and empathy for others. Medicine comes with great responsibility, but also with a huge opportunity to make a difference. I encourage you to always keep your curiosity alive and not be afraid of new challenges. The greatest impact will be made by those who can see and care for the person in front of them, not just the disease.

I wish you all the best in your future endeavors, and I am confident that each of you will become not only exceptional doctors but exceptional human beings who will make a difference in the world and in the lives of your patients.

With warmest regards,

**DR. CSABA CSONKA**

### Dear Graduates,

I remember when you started your studies a few years ago. You often couldn't even find the classroom; you didn't know how to prepare for an exam. And now here you are, standing at the gates of graduation.

Dreams come true if you work hard. I am very proud of you all in reaching the end of a journey and becoming medical doctors.

You have chosen one of the most responsible professions in the world. This is a great responsibility for you. Stay true to your medical oath and treat your patients to the best of your ability. Never stop learning because science, including medicine, is constantly evolving. You can only keep up with the development if you continually educate yourself. Find a balance between your private life and your profession.

Please accept my best wishes.

**DR. GYÖRGYI VÁRADI**

SERENADE!!!!

I love you guys so MUCH!!!!!!-CY-

## PASSING MY 3RD YEAR EXAMS

STANDS OUT AS A CORE MEMORY IN MY MED SCHOOL JOURNEY; ONE THAT I WILL REMEMBER FOR A LIFETIME.

*During online examinations, i had my exam with doctor Dobó, he was laying back on his chair, then a second after neither him nor his chair was in the screen, yea he and his chair fell off on the ground*

## FAVOURITE MEMORIES

September wine festival  
EVERY YEAR!

*On the very first day of med school, Foad and I (Asad) decided to kick things off in true legendary fashion – by missing the oath ceremony! While everyone else was swearing their undying loyalty to the noble profession, we were swearing at our alarms. Six years later, here we are, still fully doctored up, somehow allowed to graduate, and finally ready to take that oath... better late than never, right? 🎓*

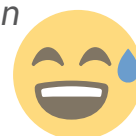

Med school gifted me my
